

File 1

1. Update the path of the input file line 8
2. Update the path of the output file line 18 **do not change /%s.pdf**
3. `pip install pdfquery PyPDF2` **run this command in the terminal**
4. Run the code

File 2

1. Assuming `pip install pypdf2` is already done
2. Update the input path line 8 in glob.glob function ** do not change `/*.pdf**`
3. Update the output path line 33 **do not change {prev}.pdf**
4. example output file path will be `out/{prev}.pdf`
